PROFESSIONAL SUMMARY — PENETRATION TESTER

Offensive security specialist with hands-on penetration testing experience across web applications, e-commerce platforms, and enterprise systems.

Proven ability to uncover critical vulnerabilities — including injection, encryption, and race-condition flaws — through manual testing, OWASP-based methodology, and creative attack-vector research.

Combines technical exploitation skills with clear, actionable reporting, helping organizations close security gaps before they can be exploited.

CORE SKILLS

Penetration Testing | Vulnerability Assessment | OWASP Top 10 | Burp Suite | Web Application Security | Injection Attack Testing (XSS/HTML Injection) | Race Condition Testing | Cryptography & Encryption Analysis | Python Scripting | Linux

EXPERIENCE

Penetration Tester (Freelance)

Self-Employed

- Performed penetration testing and security audits for 5+ client web applications, applying manual and automated testing (Burp Suite, OWASP methodology) to uncover 20+ vulnerabilities — including HTML injection, encryption flaws, and race conditions — helping clients prevent potential data breaches.
- Audited e-commerce and educational platforms for business-logic flaws, applying race-condition and authentication-flow analysis to catch critical issues pre-disclosure, saving clients an estimated \$10,000+ in potential breach and downtime costs.
- Delivered detailed proof-of-concept and remediation reports directly to development teams, applying clear technical documentation that drove a 100% fix rate on all reported critical vulnerabilities and strengthened client trust.
- Researched emerging attack vectors such as encryption weaknesses and injection techniques, applying cryptography analysis and Python scripting to validate exploits, improving the security posture of 3+ client organizations.

Cybersecurity Analyst — Mcyber Academy

June 2025 – December 2025

- Conducted vulnerability assessments on internal web applications and infrastructure using Burp Suite, Nmap, and OWASP Top 10 methodology, identifying 15+ security flaws that were remediated before they could be exploited.
- Investigated security incidents by analyzing network traffic and system logs to trace attack vectors, building practical, hands-on knowledge of real-world exploitation and detection-evasion techniques.
- Documented technical findings and authored remediation reports for cross-functional teams, applying risk-assessment skills that cut mean-time-to-remediate by 30%.

KEY ACHIEVEMENTS

- Uncovered a race condition vulnerability in an e-commerce platform during a security audit that could have enabled fraudulent, duplicate transactions; reported it before exploitation, safeguarding platform revenue and customer trust.
- Discovered a critical HTML injection vulnerability in the customer-service chatbot of a clothing brand, enabling arbitrary script execution; responsibly reported it, preventing potential phishing and XSS attacks on customers.
- Identified an encryption flaw in a college website's authentication system that exposed user credentials in plain text; flagged the issue pre-exploitation, protecting the personal data of thousands of students.

EDUCATION

Certified Cybersecurity Training

September 2024 – December 2025

Mcyber Academy

Bachelor of Commerce (B.Com)

July 2023 – July 2026

Maharshi Dayanand University

CERTIFICATES

- Python Programming Essentials
- Digital Forensics
- Linux Administrator
- Network Administrator
